## Research Projects

---

Present	<b>The Precipitable Water Project</b>
Jan 2019	This research is based on developing a computational model of the relationship between daily precipitable water measurements and the atmospheric temperature. The goal of this research is to develop and utilize the relationship using low-cost instrumentation to deduce the amount of precipitable water from the effective temperature. <b>Collaborators:</b> <i>Vicki Kelsey, Dr. Kenneth Minschwaner</i> <b>Documentation Page:</b> <code>pmat.app</code>
