Work History

Present

05 Sep 2017

Research Intern

Institute of Complex Additive Systems Analysis

The position involved tasks regarding a variety of different projects around the theme of complex systems analysis. As a part of a team, I have worked on projects regarding data preprocessing for language detection models, analysis of RF and Bluetooth models, and Internet-Of-Things research and development.

16 Aug 2017

06 Sep 2016

High School Work Study

National Security Agency

The position required a thorough background check, federal investigation including a polygraph, as part of the application in order to obtain Top Secret security clearance. Most of the tasks that were assigned revolved around clerical work, specifically inventory and data transfer requests added with Inspector General inspection preparations.

Education

May 2022

Aug 2017

Development Projects

AtmosAccess:

A Python package to retrieving atmospheric data. The goal of this project is to easily connect with the NOAA Data Access API and the Suominet database to consolidate PMAT dependencies.

Python atmospheric data

pacviz:

A R package comprised of informal, radial data visualizations for regression and comparative analysis.

docs: `pacviz.sriley.dev`

R visualization

Precipitable-Water Model Analysis Tool:

An open source software suite for the analysis of precipitable water.

docs: `docs.pmat.app`

R Python Docker
regression analysis

SALSA Mobile App:

A mobile application that displays astronomical, solar, and meteorological data based on user location.

docs: `salsa.sriley.dev`

Java Android

Research Projects

Present

The Precipitable Water Project

This research is based on developing a computational model of the relationship between daily precipitable water measurements and the atmospheric temperature. The goal of this research is to develop and utilize the relationship using low-cost instrumentation to deduce the amount of precipitable water from the effective temperature.

Collaborators: *Vicki Kelsey, Dr. Kenneth Minschwaner*

Some Analysis for Looking at the Sun's Atmosphere

A project that aims to develop methods and utilities for observing the Sun's photosphere and outer atmosphere via low-cost instrumentation. A major milestone for this project is the development of the SALSA mobile application which will display data regarding astronomical objects, the weather, and solar information.
