Work History

Present

Research Intern

Institute of Complex Additive Systems Analysis

05 Sep 2017

The position involved tasks regarding a variety of different projects around the theme of complex systems analysis. As a part of a team, I have worked on projects regarding data preprocessing for language detection models, analysis of RF and Bluetooth models, and Internet-Of-Things research and development.

16 Aug 2017

High School Work Study

National Security Agency

06 Sep 2016

The position required a thorough background check, federal investigation including a polygraph, as part of the application in order to obtain Top Secret security clearance. Most of the tasks that were assigned revolved around clerical work, specifically inventory and data transfer requests added with Inspector General inspection preparations.

Education

May 2022

B.Sc. Physics

New Mexico Institute of Mining and Technology

Aug 2017

Astrophysics and Atmospheric Physics Option

Minor in Mathematics

GPA: 3.26

Research Projects

Present The Precipitable Water Project

This research is based on developing a computational model of the relationship between daily

precipitable water measurements and the atmospheric temperature. The goal of this research is to develop and utilize the relationship using low cost instrumentation to deduce the amount

of precipitable water from the effective temperature.

Collaborators: Vicki Kelsey, Dr. Kenneth Minschwaner

Documentation Page: docs.pmat.app

Development Projects

AtmosAccess: A Python package to retrieving atmospheric data.

pacviz: A R package for informal data visualizations.

Precipitable-Water Model Analysis Tool: An open source software suite for the analysis of precipitable water.
