

Work History

Present	Research Intern	Institute of Complex Additive Systems Analysis	
05 Sep 2017	The position involved tasks regarding a variety of different projects around the theme of complex systems analysis. As a part of a team, I have worked on projects regarding data preprocessing for language detection models, analysis of RF and Bluetooth models, and Internet-Of-Things research and development.		
16 Aug 2017	High School Work Study	National Security Agency	
06 Sep 2016	The position required a thorough background check, federal investigation including a polygraph as part of the application in order to obtain Top Secret security clearance. Most of the tasks that were assigned revolved around clerical work, specifically inventory and data transfer requests added with Inspector General inspection preparations.		
Education			

May 2022	B.Sc. Physics	New Mexico Institute of Mining and Technology
Aug 2017	Astrophysics and Atmospheric Physics Minor in Mathematics GPA: 3.28	s Option

Research Projects

Present

The Precipitable Water Project

Jan 2019

This research is based on developing a computational model of the relationship between daily precipitable water measurements and the atmospheric temperature. The goal of this research is to develop and utilize the relationship using low-cost instrumentation to deduce the amount of precipitable water from the effective temperature.

Collaborators: Vicki Kelsey, Dr. Kenneth Minschwaner

Development Projects

Maintained

pacviz

v1.0.1

A R package comprised of informal, radial data visualizations for regression and comparative analysis.
